WE ONLY WANT TO FENCE IT IN

THE McMULLEN
WOVEN WIRE FENCE CO.

114-116-118-120 Orleans St.,
(Formerly N. Market St.,)

CHICAGO, ILL

PLEASE DESTROY ALL OTHERS.

Section of **McMullen's Woven Wire Fencing**, showing style of mesh and twisted wire rope selvage. The widths of our netting are given as woven in the machine. Owing to spring of the wire it sometimes appears to lack a trifle in width. In erecting, it should be allowed to come to the width to which it naturally adjusts itself.

McMULLEN'S Woven Wire Fencing

PRICE LIST, 1896.

SUBJECT TO CHANGE WITHOUT NOTICE.

FREIGHT allowed from Chicago to any railway station in the United States east of the west line of the Dakotas, Nebraska, Kansas and Texas on **twenty rods** or more of Fencing, and Gates if shipped with that amount of Fencing. West of that line we allow, in lieu of freight, \$1.00 per 100 lbs. on 20 rods or more of Fencing and any Gates shipped with that amount of Fencing.

No freight allowed anywhere on Gates alone or less than twenty rods of Fencing.

 The above applies to goods listed on pages 3, 4, 6, 7.

DIRECTIONS FOR ERECTING OUR FENCING

Set your posts firmly in the ground, at least three feet down. Use posts enough to make a good fence. Put a good brace at the first or straining post. Mark your posts where you desire the top selvage to come. Do not try to stretch the web to make it unnaturally wide. Drive a nail part way into each post on the line near the top of the post. Unroll the fencing and hang it on these nails, drawing it out straight. Staple the selvages and intermediate wires firmly to first post. Be careful that the end of the web is square; that is, that the twists are each above the other, true. Take a "ratchet" stretcher and draw top selvage quite tight, and staple it for say 200 feet while being drawn. Then draw the bottom selvage moderately tight, and give the top selvage another stretch so as to make it very tight. You can draw with your hands the intermediate wires to keep them even with selvages. Be careful to have selvages straight and tight, but do not attempt to unduly expand the netting at the posts; simply make it hang smooth on the posts at width it will easily come to. If there are any large obstructions, remove them if possible; if impossible or the ground is uneven, cut the web at the top in starting up hill, and at the bottom going down hill. Galvanized staples are the best. They and "ratchet" stretchers are both sold by dealers, or we can supply them at prices given on page 11.

McMULLEN'S HEX POULTRY NETTING.

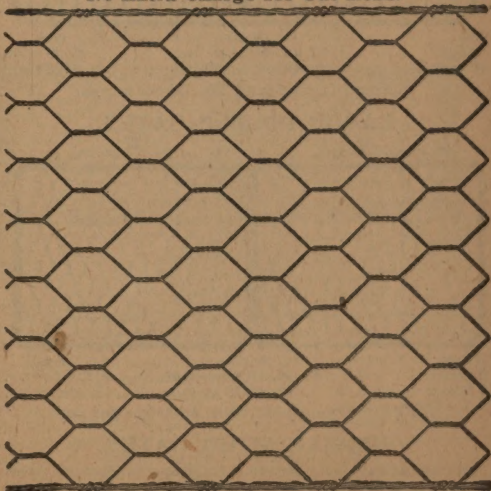

**DISCOUNTS, FREIGHT, TERMS, ETC.,
FURNISHED ON APPLICATION.**

We manufacture and aim to keep in stock **two inch, one and one-half inch and one inch** Hex Poultry Netting, made of best galvanized steel wire (three strands in each selvage) in widths varying every six inches, from one to eight feet, in following sizes of wire:
